

Arthur Jensen is the General Manager of the Bay Area Water Supply & Conservation Agency (BAWSCA), comprising 28 utilities that purchase water from the San Francisco Public Utilities Commission (SFPUC) for resale to their local service areas. The Agency represents its members' collective interests in their relationship with the SFPUC on matters related to water supply, facility reliability, operations, water quality and wholesale water rates.

In 1995, Art joined the Bay Area Water Users Association (BAWUA), BAWSCA's predecessor organization. Prior to that time he served for 5 years with the Contra Costa Water District, involved in the areas of planning and engineering. Earlier in his career, working as a consultant for a major engineering firm, Art performed planning studies for the SFPUC's regional water supply, treatment and delivery system. Later on and for a period of more than 6 years, he served as Deputy and Acting General Manager of the San Francisco Water Department. Art's current position provides him a different perspective and additional opportunities for advocating rational approaches to current and future water issues in California, particularly in the SFPUC service area.

Art has an advanced degree in Environmental Engineering Science from Caltech, and has taught courses in water resources at both Stanford and UC Berkeley.
