Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Jean Struthers

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Joe Cote

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Judy Schriebman

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

K Krupinski

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Lisa Moreno

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Charles Rossmann

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Nick Maurer
