We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Connie Lindgren

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Kelly Miller-Sanchez

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Vincent Campisi

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Jean Struthers

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Stephen Lombardi

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Jean Doak

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Susan Hampton

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

George Yenoki

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Hugh Bialecki

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,
Heather Haas

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Joanne Sulkoske

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Michael Ireland

Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Rosana Castrillo Diaz

Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Greg Perkins

The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

SL Castellanos

The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Barbara Burns

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Susan Pierszalowski

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Gary Goetz

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Doug Bender

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Henry Martinez

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

William Gies

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

John Van Horne

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Greg Rosas

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Cynthia Alderson

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Fred Athey

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Kathy Robinson

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Corinne Levy
777 Cayuga Ave

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Dyan Osborne

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Ellen Gachesa
Napa, CA 94558

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Oscar Balaguer

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Hannah MacLaren

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Sally Olah

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Frank Ackerman

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Steve Tyler
Orange, CA 92865

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Carol Patton

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Susan Abby

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Florence Hoffert
El Segundo, CA 90245

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Priscilla Stoyanof

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Amy Liebman

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Lindy Novak

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Jonathan Wieder

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Howard Eisenberg

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Daniel Prechtel

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Linda Frankel

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Fred Licht

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,
Eileen Karzen

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

George Whitman

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Kelly Stevenson

The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Jean Roth

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Ray Pine

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Ken Clark

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

David Kasheta

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Jesse Painter

Subject: Bay Area Water Supply and Conservation Agency (BAWSCA), please drop your lawsuit blocking environmental protections for the Bay

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Barbara levinson

The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Jean Struthers

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Richard Nevele

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

DIANE LIVIA

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Michael Rudovsky
Concord, CA 94521

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

John Lopez

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Bret Perry

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Robert Cameron

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Ron Nass

Dear Bay Area Water Supply and Conservation Agency,

Dear BAWSCA Directors:

I am writing to ask you to drop your lawsuit against the State Water Board's Bay-Delta Water Quality Control Plan. The state is seeking to better balance water use in order to protect the Bay-Delta, the Central Valley rivers that flow into it, and the fish and wildlife that live there. Your ratepayers do not want to fund anti-environmental lawsuits. They strongly support environmental protections.

Ratepayers reject use of our money to pursue a doomed lawsuit aimed at preserving excessive diversions from the Tuolumne River, the source of our drinking water. The state notified you in October, 2021 that these excessive diversions are unacceptable, in light of the environmental damage they're causing. Rather than work with the state to restore the environment, you are suing.

The Tuolumne is one of the Sierra Nevada rivers that feeds the San Francisco Bay-Delta. This entire ecosystem is on the brink of ecological collapse. Six fish species are now listed as threatened or endangered, and once-bountiful wild salmon populations are on the verge of extinction. Toxic algae blooms that flourish in the stagnant cesspool left after excessive upstream diversions threaten people, pets, and wildlife. The salmon fishing industry, and coastal communities they support, are struggling to survive. Salmon runs that are central to tribal culture and spirituality are in danger of being lost forever.

The Tuolumne River has among the worst flows of any Central Valley salmon river, particularly in dry years. It is not a surprise that over the past 30 years, mismanagement by the SFPUC, which supplies water to BAWSCA, as well as the Modesto and Turlock irrigation districts that also syphon from the Tuolumne, have produced the worst salmon recovery record of any major Central Valley river.

Your constituents on the SF Peninsula strongly support the environment. In 2016, more than 70% of Bay Area voters supported Measure AA, agreeing to tax themselves to restore the Bay's wetlands.

A peer review of your faulty restoration plan, commissioned by the National Marine Fisheries Service, confirmed that the plan is not supported by credible science.

We appreciate that BAWSCA agencies are committed to ensuring reliable water supplies to residents. We want reliable water too. The evidence shows that BAWSCA can maintain highly reliable water supplies while taking needed steps to protect the Tuolumne River and the Bay-Delta. It is time for BAWSCA and the SFPUC to catch up with communities like Los Angeles and Orange County, which are far ahead when it comes to investing in alternative water supplies like water recycling.

Again, we strongly encourage you to drop your lawsuit over the Bay-Delta Plan and support real environmental protections. We are confident that investments in proven water management tools, currently not being used, can ensure a reliable water supply, while supporting a healthy Tuolumne River and Bay-Delta.

Sincerely,

Martin Gothberg
